Documents include, but are not limited to, responses to CERCLA Section 104(e) information requests, contractor invoices, and progress reports. In

performing these tasks, employees of the contractors and subcontractors listed below will be required to sign a written agreement that they: (1) will use the information only for the purpose of carrying out the work required by the contract; (2) shall refrain from disclosing the information to anyone other than EPA without the prior written approval of each affected business or of an EPA legal office; and (3) shall return to EPA all copies of the information and any abstracts or extracts therefrom: (a) upon completion of the contracts; (b) upon request of EPA; or (c) whenever the information is no longer required by the contractor or subcontractor for performance of work requested under those contracts. SUPPLEMENTARY INFORMATION: An important task for environmental protection is to identify, and subsequently to prevent, eliminate, or mitigate the risks to human health and the environment posed by toxic substances. Natural and synthetic fibers are one group of substances that have been identified to be of potential concern. The health endpoints of potential concern for respirable fibers are the potential development of respiratory diseases, including cancer, from chronic inhalation exposure. Many of these fibers have wide industrial and commercial applications, but there is limited, inconclusive, or virtually no information about their health effects and/or exposure to workers, consumers, and the general public. As a result, EPA has added to its Master Testing List (MTL) a "respirable fibers" category as priority substances for health effects and exposure testing to obtain the necessary data to evaluate the extent and magnitude of health risks to the exposed individuals and populations. This would then allow the Agency to determine whether or not there is a basis for any risk reduction measures. EPA recognizes that the current health effects test guidelines for chronic inhalation toxicity and/or carcinogenicity are not specific enough for the testing of fibrous substances. Thus, there is a need for EPA to develop standardized health effects test
